ABOUT COMPANY

AI Spera, a frontrunner in cyber threat intelligence, was founded at the Hacking Response Research Center, Korea University. Our data-driven security solutions are principally based on anomaly-behavior detection combined with AI and machine learning technology. Dedicated to ensuring ongoing visibility, we effectively manage assets that are scattered across the attack surface in order to safeguard them from attackers. The more sophisticated methods of attackers become, the harder we strive to contain threats lurking in the cyberspace.

MAIN PRODUCTS

•RMR

A gdXadW_ aef^ESYeZ[b^bdaVgUFD? D(D[e] ? S` SYW_ W fDWbad)
[e S`ESSEŽTSeVW W fWbdeW3ffSU] `EgdSUW? S` SYW_ W f
solution powered by AI and machine learning. Securing clear
visibility into enterprise IT assets on the attack surface, its simple
integration gives you the most exhaustive data feeds that cover
all the externally exposed digital assets and vulnerabilities within.

•Prime Use Cases

- 1. Detection of new vulnerabilities

- 2. Closure of dangerous ports left wide open
- 3. Discovery of new corporate assets

•Integration with Criminal IP

Paired with our advanced Criminal IP, a Cyber Threat Intelligence search engine, conduct a more deeply
Ua` fVY fgS^l W` eV\$ dUJ` aXfZWSeeWfe`S^W\$V k` [VW f[-VW`
fZdagYZ`D? D`S` V` dWVW hVWV dUZWV` fZdV\$ f [fW^Y W UW
via API integration.

DIFFERENTIATION

1. Streamlined security control

Automatically generated threat report alleviates the burden compounded by outdated security control infrastructure

2. Coverage of threat data

4.2 billion IP addresses, domains, ports, and all types of internet-facing information are refreshed and streamed around the clock

3. Easy accessibility via web-interface

Adoption requires only one primary domain address of assets in operation

REFERENCE CUSTOMERS and KEY PERFORMANCE

ABOUT COMPANY

Pseudo random number generators are vulnerable to hacking because they tend to have a predictable pattern hackers can exploit. The weak entropy problem is compounded for FinTech & IoT devices with limited access to physical random events such as mouse movement. EYL provides Quantum random number generator that extracts randomness from radioactive isotope put in the very tiny chip(2mm) in order to generate perfect encryption keys. EYL is the 6[S_a`V`I [``WdX? See5ZS^WYW4aefa` `SefkVdS_a`Y`\$!(````efSdfgbe`Xb_``*``Uag`fdVæZ

MAIN PRODUCTS

•Quantum entropy chip

- enables us to harvest ultimate randomness from nature using radioactive isotope decay
- Can dramatically improve security of all IoT devices because they can provide more secure encryption powered by quantum entropy chip

•Quantum random number generator

- GE4I`_aVg`Sd`B5;Z7j bdWe`fkbWaXcgS`fg_`cS`Va_``g_ TWdYWW WdSfad`i [fZ`hSk[`Y`ebVWW`e` and user interface to meet the customer needs using Quantum entropy chip

•Quantum Shieldz® Cipher™

- [e`S`eWæX-U[W`f`ha[UWW`Uckbf[a` `VW[UWfZSfi`ad`e`i [fZ`kagdbWæa`S^e_`SdfbZa`Wæ
- It uses an encryption key generated by a quantum random number generator (QRNG) to securely encrypt the user's voice, completely blocking eavesdropping or unwanted recording through spyware.

DIFFERENTIATION

- Can be deployed on any kinds of IoT devices since it is very small(2mm) and affordable
- Post processing is not needed to meet the NIST requirements because it provides ultimate randomness
- Compare to competitor's quantum random number generator, EYL's products are 3 others of magnitude smaller and cheaper
- Other companies commercialized quantum random number generator using optical methods that provide quantum entropy at high speed, but they are prohibitively expensive and bulky.

REFERENCE CUSTOMERS and KEY PERFORMANCE

Our solution, HIWARE, helps you strengthen your system security by detecting threats with identity/account management, and protects your data from malicious attacks by restricting and controlling user access. As ID life-cycle management is carried out actively, you can decide on your password policies in detail. With authentication options we provide you, users need to complete set of protection steps to access the information that is restricted to their use, with restricted commands. You can also monitor you users in real-time and through audit reports. HIWARE supports system, database and active directory. Reach out to us to learn more about the Xg`Uf[a`e`S`V`VWS[ŕ`aXagdbdVgUf`S`V`Zai`i`Wbdh[VWkag`fZWTVefB3?`ea`ŕf[a`[ŕ`fZW_`Sd`VŰZ`
It has been 15 years since our company was founded. Internationally we are mostly active in South East Asia and we also have customers in Europe, North America and Latin America. We are the market leader with the biggest market share in South Korea with more than 1,200 customers. Some of our customers are big international companies like Samsung, Hyundai, LG, ;@9`4S`][ŰWUž5gdW`f`k`i`WSdWi`ad[]Y`i`[fZ`EZ[]ZS`4S`][ŕ`H[W`S_`S`V`@UWbSk`[ŕ`Va`Wb[Sz`

ABOUT COMPANY

Safe & Secure World, S2W is a data intelligence company that solves the problems with technology for good. In a data-driven hyper-connected society, we propose solutions that TW W-f[\ V[h[VgS^ei Uadbaçffja` e`S` V`eaU[VWk`ea`fZSfWwVka` WweSXWk`[e`YgScd` fVWV`S` V`Tçd` V` value is protected. S2W specialize in cyber threat intelligence, brand/digital abuse detection, and blockchains of illegal virtual assets. We provide customized solutions to customers through technology such as big data and algorithm analysis, blockchain on-chain data analysis, and machine/deep learning.

MAIN PRODUCTS

•Quaxar
C gSj Sd[e`fS[âdW[\` fWfYW UWebWU[-US`k` VVê[Y` VW` XädfZW enterprise's optimized operational environment. It features the ability to mount customer CTI-related data within Quaxar to quickly and accurately respond to threats and allows you to monitor a variety of exclusive information by linking external threat information with Quaxar. This helps clients make better

decisions for sustainable growth beyond protecting their core assets.

•Xarvis

Xarvis is an integrated search engine for deep/dark web, which helps clients comprehensively grasp all the information on the surface web and hidden channels. Through integrated web monitoring, it allows to collect pieces of information related to the case and criminal and derives meaningful intelligence through data dW` W_ W fS` V[\` ŽVWb fZ` S` S`k

DIFFERENTIATION

S2W's CTI solution is differentiated by its unique external threat monitoring coverage and high-accuracy risk factor detection based on relationship analysis. It monitors more than 100 digital channels, including social media, blockchain, and Telegram focusing on more than 90 million dark web pages and 1.5 million dark web domains and covers more than 20 risk factors such as source code, assets, API keys, malware, privacy documents, phishing/smishing. It also provides immediate actionable intelligence based on an understanding of the attack group, providing customized response in the event of a threat.

REFERENCE CUSTOMERS and KEY PERFORMANCE

S2W provides cyber threat intelligence solutions to major Korean companies in various [VgefdVê`egUZ`Se`~` S` U[S†`fWVWJa__`g` [USfja`el`_`aT[†fkl`dWS[^S` V`Ua__` WdUW` games as well as public institutions. (KISA, NSR, etc.)`8gdZVd_`adW`i` WaX-U[S`k`e[Y` VW` contribution agreement with Interpol to have a partnership and supply threat intelligence data to contribute to international cybersecurity. We did a Clop Ransomware arrest operation which provided Interpol with analysis of Clop-related infrastructure information fa`fdSU]`[fe`adY[\`†4[†Ua[\`Éai` S` S`ke[e`S` V`bç~†`Y`5`âb`çd` ea__i` SdWabWçSffja`e`a`` dark web and Grandcrab&Revil Sodinokibi arrest operation which provided cyber and malware technical expertise to Interpol and its member countries.

ABOUT COMPANY

Stealth Solution, located in Seoul, South Korea, is a startup that provides an intelligent security platform for a new security paradigm. They help companies invest in security infrastructure Ua` f` gage!k! Tg[V` S` UkTWZd/ŠF d/Véba` eVWV h[ç` _ W f S` V` W[_ [S fWd[e] `XSUfaçž 4Vé[VVé!` E fVŠ`fZ Ea`g f[a` `SUf[hWk` ZSe`d/Véba` VVW` fa`UkTWŠffSU] e`Tk`Sbb`k[Y`` Vÿ fZYW WŠf[a` `? F6` strategies to detect and block malicious attacks.

MAIN PRODUCTS

•Stealth Moving Target Defense(SMTD)
E? F6`[e`TSeVW`a` `` Wfi` ad` `Zaef`SVVdWéé`_gfŠf[a` `fWUZ` a`âYk`fZŠf`_gfŠfVé;B`SVVdWéé`S` V` PORT number of network host continuously, network deception technology, and network d/VéWUf[a` `fWUZ` a`âYk`ea`fZŠf[f`_ S] Vé` _ baee[T`WXdSffSU] Wé`fa`[VW f[k`fZW` Wfi` ad` `Zaef`Xb`_` fZW`-çf`SffSU] `efSYWž

DIFFERENTIATION

- Hide major server address
The main server information can be hidden by continuously changing the properties of the attack surface(IP, Port, Protocol, Application, etc.)
- Secure client communication
The client that needs to connect according to the hiding of the server address guarantee S`eWUgdWUa`_`g` [USf[a` `UZS` `W`fZŠf[e`e[_ [Sdfa`HB@`Ua`_`g` [USf[a` `Tk`Ud/VŠf` Y` separate hidden tunneling to continuously track the server address.
- Hacking Prevention
It can effectively defend against attacks in the reconnaissance and detection phases of the cyber kill chain. It is particularly effective to active and passive scanning attacks.
- Zero Trust
4`âU] `g` SgfZad! VW`U`W`FeWthWdSUUVéé`S` V`VWŠ`f` Y`i` [fZ`[` e[VWd`fZd/VŠe`fZçgYZ`I`Wb` trust policy
- Ensure server stability
Adopting a secure gateway method of physical card type, which does not require installation of server agent, ensures server stability and installation of legacy solutions without compromise.
- Advanced deception system
Construction of an advanced deception system that provides improved functions such as behavior analysis and abnormal behavior detection of unauthorized/unauthenticated clients along with network address changing technology.

REFERENCE CUSTOMERS and KEY PERFORMANCE
